

One pair of points, three readings of the line, and the cells each traces
 rdggs.cells_from_line(2, start, end, line=...)

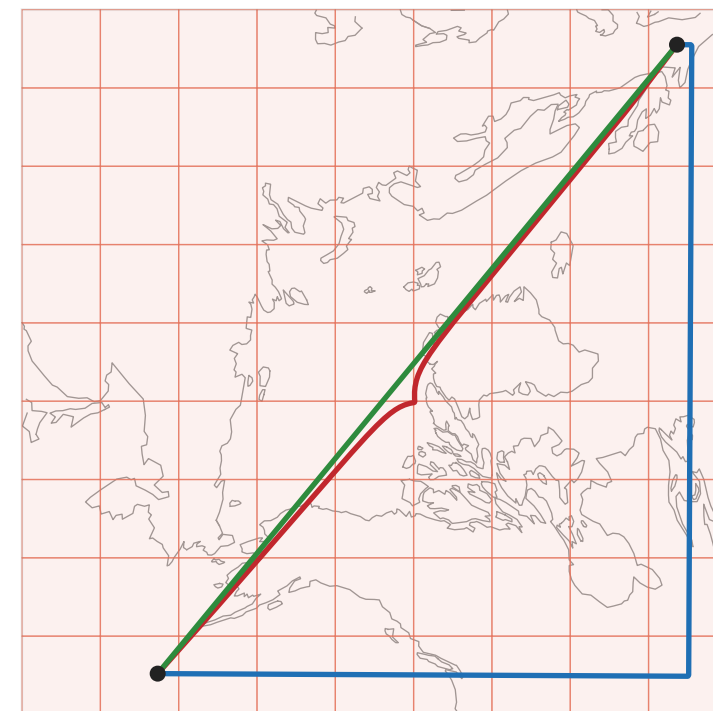

on the ellipsoid, looking down on the pole

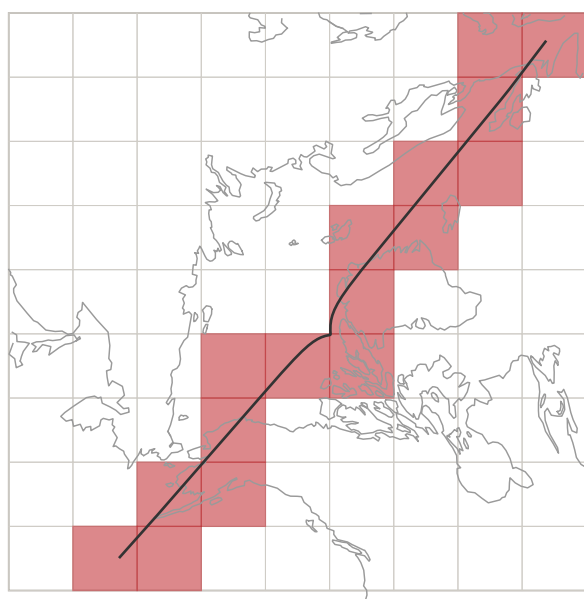

in plate carrée

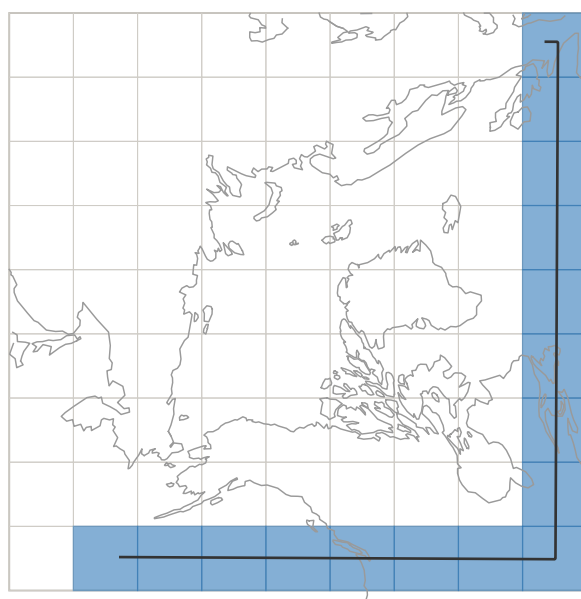

the same square in the plane

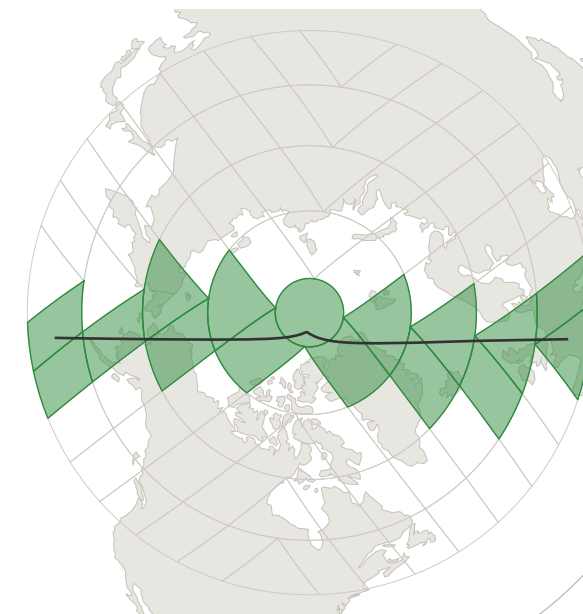

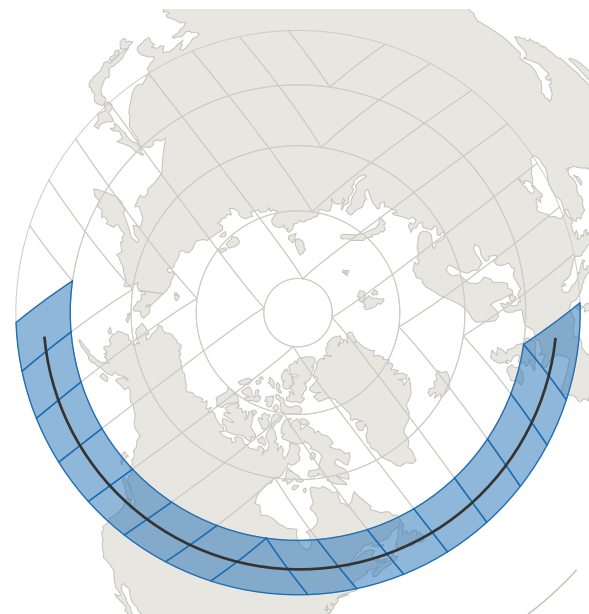

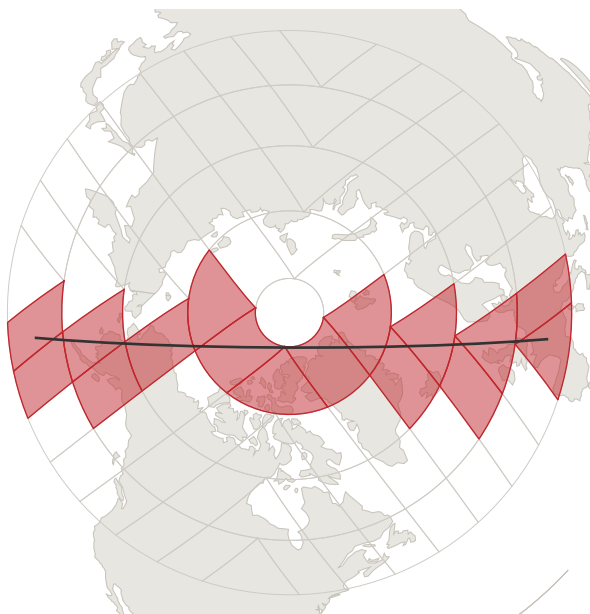

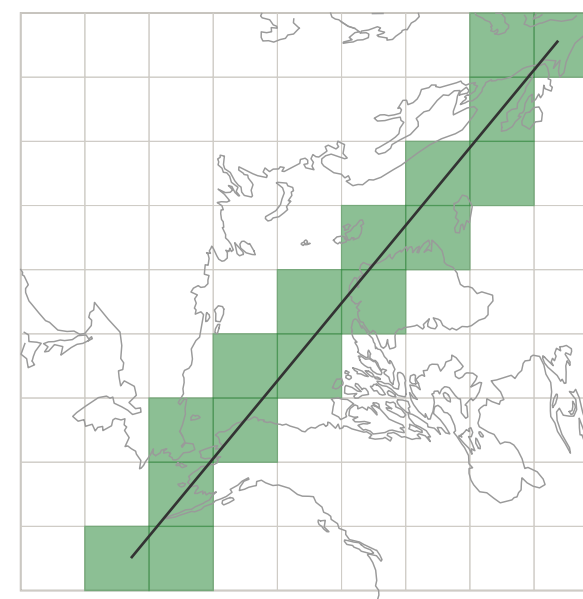

geodesic: 16 cells

plate_carree: 16 cells

plane: 16 cells

— line="geodesic" — shortest path on the ellipsoid — line="plate_carree" — straight in plate carrée — line="plane" — straight in the plane
